

Seven – feast of the fishes

The Feast of the Seven Fishes is an Italian tradition (also celebrated in many American-Italian homes) that takes place on Christmas Eve, and it is all about celebrating with family.

It consists of seven fish or seafood dishes (or less sometimes, but it must be an odd number) and typically includes baked cod, clams, calamari, scallops, anchovies, lobsters and more.

The custom of eating fish on Christmas Eve comes from Catholic origins, but the feast is also a thoughtful time on the eve of the nativity.

You can win your own festive feast: A vegan hamper.

Tasteful options

Leipa Group is well known for producing papers with passion, for environmentally conscious processes and technologies and outstanding customer care. The independent, family business can draw on more than 175 years of paper making, giving it a wealth of experience and knowledge. In the UK, the company has had a dedicated presence for more than 20 years.

In the production of high quality 100% recycled paper and packaging grades, Leipa is a world leader, and its expertise extends to the conversion of waste paper back into valuable materials with which to make that paper, making it a truly sustainable company.

Within the group is Leipa Flexibles, itself benefitting from almost 60 years' expertise in developing paper based and monopolymer based materials, and it brings to market truly sustainable solutions. It is dedicated to serving the highest quality solutions for flexible packaging customised to many industries. Always with an eye on sustainability, its products also promise low resource consumption to offer more eco friendly options for brands.

Its solutions are produced based on paper, film (mono materials/polyolefin) or biodegradable polymer, with different barrier properties.

Leipa Flexibles' products answer the needs of brands looking to move away from plastic packaging and dramatically reduces the amount of plastic packaging in the cycle by replacing it with paper based alternatives. Whether paper based or composite materials, the substrates are designed and based on the principles of taking out waste, keeping products and materials in use, and regenerating natural systems.

Products range from hot and cold sealed peelable paper; transparent multi-layer films; sealable, printed paper with polymer composites; tube laminates; thermoformable papers, and functional barrier films.

Question: How many square metres of flexible packaging does Leipa produce each year?
