

## Eight Days of Christmas

Whether you are out and about in the freezing cold carolling and wassailing or wrapped up warm by the fire with a hot chocolate listening to your all time favourites tunes, festive music plays a big part in our seasonal enjoyment.

From choirs singing classic carols to modern beats or popular gems that pop up each December, it just doesn't feel like Christmas until we have heard some of those favourite songs. They remind us of snow, twinkling lights, Christmas trees, but most importantly being together at this special time.

Eight Days of Christmas was released by Destiny's Child in 2001. As the song says 'Doesn't it feel like Christmas (It feels so lovely).

### You can win some fantastic festive fizz: A bottle of Champagne

#### Bubble over with creativity

Premier's Display Graphics division has added eTEC Air Bubble Board, a game changing product in the display graphics sheet media range to its ever expanding portfolio.

As a premier choice for polypropylene bubble boards, this cutting edge material offers unmatched performance, durability, and sustainability, making it the go to solution for signs, displays, and more.

eTEC Air Bubble Board features a white bubble core that provides superior stability and rigidity, while its smooth, bright white print surfaces ensure vibrant and accurate prints. Treated for long term outdoor durability, the board is versatile for a variety of uses, including signage, point of sale displays, and exhibition panels.

The eTEC Air Bubble Board benefits from many features that will help users to maximise efficiency.

It offers excellent rigidity and the board's polypropylene core ensures maximum stability and light weight for easy handling.

Long term durability is also promised and it is UV treated for extended outdoor use and built to withstand harsh elements, including chemicals, water, and extreme weather.

Sustainability, as with all Premier's media offerings, is key too. This new product is made in Europe, PVC free, fully recyclable through the FESPA waste accreditation scheme and eligible for carbon capture.

It also allows easy fabrication: the bright white satin surfaces offer a smooth, easy to print area, compatible with UV inks, for stunning visual results.

With its combination of eco friendly materials, durability, and print quality, eTEC Air Bubble Board sets a new standard for the industry.

#### Question: On what technology can you print eTEC Air Bubble Board?
